

ALAM MD TASIN

DEVOPS AND CLOUD ENGINEER

Higashihiroshima, Hiroshima, Japan | +81 70-8522-5753
alam.tasin.cse@gmail.com | LinkedIn | GitHub

PROFESSIONAL PROFILE

DevOps Engineer with 1.5+ years of hands-on experience supporting 6–7 production platforms and 200+ containerized services, with peak environments exceeding 300 services, for systems serving more than 1 million users. Experienced in near-daily deployments, production troubleshooting, automation, observability, AWS infrastructure, Docker Swarm, CI/CD, and Dev, UAT, Production, and DR operations.

PRODUCTION IMPACT

- Supported 200+ containerized services, with peak environments exceeding 300, across 6–7 FinTech and enterprise platforms.
- Handled near-daily releases; on active deployment days, supported approximately 5–6 new service deployments and 7–8 service updates.
- Built preventive automation for service updates, log retention, temporary-file cleanup, database operations, SSL monitoring, and operational notifications.
- Implemented proactive SSL-expiry alerts 10–15 days in advance and Telegram-based service, resource, and operational notifications.

TECHNICAL EXPERTISE

Cloud and Infrastructure: AWS EC2, S3, RDS, IAM; Linux; networking; Nginx; load balancing; SSL/TLS; backup and recovery; Production/DR

Containers and CI/CD: Kubernetes, Docker, Docker Swarm, Docker Compose, Docker API, Jenkins, GitHub Actions

DevSecOps and Security: Secure software development, CI/CD security fundamentals, OpenSSF best practices

Observability and Reliability: Prometheus, Grafana, OpenSearch, Filebeat, SRE, incident response, root-cause analysis

Platforms and Data: Kong, Konga, Kafka, Zookeeper, Redis, MinIO, PostgreSQL, MySQL, MSSQL, MongoDB

Automation and Development: Python, Bash, Shell scripting, PowerShell, Git, GitHub, JavaScript, Node.js, REST APIs

PROFESSIONAL EXPERIENCE

DevOps Engineer | Rez Corporation Limited

Feb 2024 – Aug 2025

Hybrid | Sister concern of Rosebay and Red Technologies Ltd.

- Created and maintained Jenkins and GitHub Actions pipelines and Docker-based workflows for a large microservices ecosystem.
- Managed Dev, UAT, Production, DR, application, and database environments across AWS and server-based infrastructure.
- Diagnosed production incidents involving high memory utilization, disk exhaustion, abnormal logging, service failures, database issues, and infrastructure instability.
- Implemented Prometheus, Grafana, OpenSearch, and Filebeat monitoring and logging workflows to accelerate incident detection and investigation.
- Automated recurring operations using Python, Bash, Docker API, and database scripts, reducing repetitive manual work and preventing recurring failures.
- Supported migrations, SSL/TLS operations, IAM/access controls, backups, recovery activities, API gateways, messaging systems, and object storage.
- Administered PostgreSQL, MySQL, and MSSQL environments, supporting maintenance, database connectivity, query investigation, and performance troubleshooting.
- Operated Kong, Kafka, Zookeeper, Redis, and MinIO components supporting API communication, real-time integration, caching, and object storage.

SELECTED PROFESSIONAL PROJECTS

ShebaPay | FinTech Platform

Supported production microservices, deployment workflows, monitoring, centralized logging, incident troubleshooting, automation, and operational reliability for a high-scale financial platform.

Zain | Enterprise Client Platform

Supported containerized service deployments, production operations, monitoring, logging, troubleshooting, infrastructure maintenance, and operational documentation.

Aeon | Digital Services Platform

Worked with Kong API Gateway, PostgreSQL, and AWS infrastructure and contributed to planning a Kong database migration from AWS RDS to on-premises infrastructure.

Digitel | Telecom and Digital Platform

Supported service deployments, infrastructure monitoring, CI/CD operations, production diagnostics, troubleshooting, and ongoing service management.

MLajan | Data Driven Platform

Supported containerized services, Kafka-based integration, MinIO object storage, monitoring, troubleshooting, deployments, and production infrastructure operations.

BRAC Bank | Enterprise Financial System

Supported secure production services, deployments, database operations, monitoring, troubleshooting, infrastructure maintenance, and operational reliability.

SELECTED AUTOMATION AND RELIABILITY WORK

- Developed Docker API-based operational tooling for service discovery, service control, and log access.
- Implemented threshold-based cleanup for excessive logs and temporary files to reduce the risk of disk-space incidents.
- Automated certificate validation and alerts 10–15 days before SSL expiry, allowing time for approval and renewal before disruption.
- Applied a layered troubleshooting process across containers, logs, system resources, databases, networking, and monitoring metrics.

INCIDENT RESPONSE AND MIGRATION EXPERIENCE

- Investigated high-memory incidents by identifying affected services and correlating container health, process behavior, resource metrics, and application logs.
- Resolved disk-space exhaustion caused by excessive logs and unnecessary files, then implemented automated retention and cleanup to reduce recurrence.
- Supported extended server, service, and database migration activities, including validation, troubleshooting, recovery, and post-change monitoring.

RESEARCH AND EDUCATION

Research Student | Hiroshima University

2025 – Present

Graduate School of Advanced Science and Engineering | Informatics and Data Science

- Research focus: LLM-driven web automation systems, intelligent web navigation, and automated webpage generation.

Bachelor of Science in Computer Science and Engineering | Daffodil International University

2024

LANGUAGES AND TRAINING

English: Professional working proficiency; TOEIC Listening and Reading 795/990

Japanese: Beginner; currently studying N4-level material

Training: Complete Web Development, Programming Hero

CERTIFICATIONS

- Developing Secure Software (LFD121) - The Linux Foundation / OpenSSF
- Introduction to Kubernetes (LFS158) - The Linux Foundation
- Introduction to DevOps and Site Reliability Engineering (LFS162) - The Linux Foundation
